

Key Findings

- Drug checking services with FTIR and test strips are now available in the Northern Health Region. Services are available with POUNDS in Prince George and Northern Health in Terrace.
- From the 45 samples tested in June, results seem consistent with other areas of the province. Fentanyl was detected in all opioid samples checked. No stimulants or psychedelic samples tested positive for fentanyl in June.

Please note that the presence of the expected substance does not imply purity, as samples frequently contain adulterating cutting agents

Depressant June include:

benzodiazepines, etizolam,
GHB, hypnotics

Opioid June include:

"down," heroin, fentanyl,
pharmaceutical opioids

Polysubstance includes:

cross-category mixtures

Psychedelic June include:

MDMA and related,
2C-family, tryptamines,
ketamine, LSD

Stimulant June include:

methamphetamine,
"speed," cocaine and crack
cocaine, cathinones

Unknown includes:

Samples where the individual
was unable to identify an
expected substance. This
includes found samples.

Data represented here are collected from our partner sites across the province. Drug samples are tested using the Fourier Transform Infrared (FTIR) spectrometer in combination with fentanyl test strips and benzodiazepine test strips.

There is 5% fentanyl detection limit on the FTIR spectrometer (McCrae, 2019), and a drug check on any given sample consists of both the FTIR and BTNX fentanyl immunoassay test strip testing done in combination. When applicable, BTNX benzodiazepine immunoassay test strips are also used.
