

Key Findings

- In March, a total of 182 drug checks were performed at the Albert Street site, nearly doubling last month's record high. Increases in samples checked occurred primarily in the opioid category.
- The percentage of opioids testing positive for benzodiazepines decreased from 88.7% to 61.2% in March (90 of 147 samples).
- Drug checking services are expanding! Services are now operating 7 days a week from 11:00am–8:30pm at 250 Albert Street. Samples can also be dropped off any day of the week and results can be picked up during drug checking hours.
- Substance (The Vancouver Island Drug Checking Project), offers drug checking in Victoria and communities across the Island, as well as mail in services. For more information about drug checking sample results in the Island health region, please visit substance.uvic.ca.

Number of drug samples checked in the past 6 months

Number of samples by drug category in March

Opioid	147
Stimulant	24
Depressant	4
Psychedelic	3
Other	0
Polysubstance	0
Unknown	4

TOTAL: 182

Components found in drug samples in March

Components in opioids

Additional compounds that were detected a single time each have been excluded from this graph, which include: fentanyl precursor, dexamethasone acetate, n-ethylheptedrone, nitrazolam, plaster, sucrose.

Components in cocaine

Components in methamphetamine

Number of samples tested with fentanyl present

Percentage of opioids testing positive for benzodiazepines in the past 6 months

During the month of March, **61.2%** of expected opioid samples tested positive for benzodiazepines using test strips in our partner site in Island Health (**90 samples of 147 checked**). Opioid samples are checked for benzodiazepine-positivity using BTNX test strips and the FTIR spectrometer. The results presented here are derived from both of these technologies and are presumptive until confirmed by a laboratory.

Number of drugs checks at each site:

Location	# of Drug Checks
Wesley Street OPS (CMHA)	182

Number of samples that matched client expectation

using FTIR/test strip drug checking

EXPECTED DRUG	Matched	Did Not Match	Match Not Determined	Samples Tested
Opioid	144	2	1	147
Stimulant	24			24
Depressant	2	2		4
Psychedelic	3			3
Unknown			4	4
Total	173	4	5	182

Number of opioid samples that matched client expectation

*using FTIR/test strip drug checking

EXPECTED DRUG	Matched	Did Not Match	Match Not Determined	Samples Tested
Fentanyl	4			4
Down	140	2	1	143
Total	144	2	1	147

Please note that the presence of the expected substance does not imply purity, as samples frequently contain adulterating cutting agents

Depressant include:
benzodiazepines, etizolam,
GHB, hypnotics

Opioid include:
"down," heroin, fentanyl,
pharmaceutical opioids

Polysubstance includes:
cross-category mixtures

Psychedelic include:
MDMA and related,
2C-family, tryptamines,
ketamine, LSD

Stimulant include:
methamphetamine, "speed,"
cocaine and crack cocaine,
cathinones

Unknown includes:
samples where the individual
was unable to identify an
expected substance - this
includes found samples.

Data represented here are collected from our partner sites across the province. Drug samples are tested using the Fourier Transform Infrared (FTIR) spectrometer in combination with fentanyl test strips and benzodiazepine test strips.

There is 5% fentanyl detection limit on the FTIR spectrometer (McCrae, 2019), and a drug check on any given sample consists of both the FTIR and BTNX fentanyl immunoassay test strip testing done in combination. When applicable, BTNX benzodiazepine immunoassay test strips are also used.
